

Pavlo Malairov, PMP

Project Manager | Technical Operations | Implementation Delivery | Process Improvement

Email: pmalairov@gmail.com | LinkedIn: linkedin.com/in/pavlo-malairov-b51840219 | Portfolio: malairov.github.io

PROFESSIONAL SUMMARY

PMP-certified operations and implementation professional with experience across regulated technical environments, aerospace manufacturing service delivery, AI-enabled transportation technology projects, industrial supply programs, process controls, stakeholder coordination, and operating-system design. Focused on roles where technical operations need clearer control, implementation discipline, service-delivery visibility, and measurable execution outcomes.

TARGET ROLES

Operations Project Manager	Technical Operations Project Manager
Implementation Project Manager	Process Improvement Project Manager
Service Delivery Project Manager	Customer Programs / Technical Program roles

SELECTED EXPERIENCE

MSC Industrial Supply - Embedded technical operations support for a major aerospace manufacturing client

Production-critical industrial supply program spanning 5 buildings, 17 vending systems, 1,500+ active SKUs, and 30+ suppliers.

- Built the operating foundation for a consignment service-delivery program: master data, issue tracking, replenishment planning logic, vendor follow-up visibility, and operational reporting infrastructure.
- Created an exception-based replenishment workflow using Excel, Power Query, and VBA; reduced manual ordering review from about 5 hours to about 30 minutes.
- Structured the catalog from roughly 400 tracked items to 1,800+ tracked items, with 1,500+ active SKUs and searchable cross-reference logic.
- Developed control loops for floor feedback, slot-economics review, JIT / safety-stock logic, billing-state tracking, vendor/spec governance, new SKU intake, and MWO shortage tracking.
- Positioned the work as industrial service delivery and process-control improvement, not warehouse or inventory-clerk activity.

SmartC - AI-enabled transportation technology delivery

Technical project delivery across cross-functional hardware, software, QA, integration, and sponsor-governance workstreams.

- Coordinated recovery and delivery work for AI-enabled transportation technology projects, including validation, pilot-readiness, issue visibility, and sponsor-controlled change governance.
- Supported delivery rhythm across 30-40 day cycles and cross-functional contributor growth from roughly 7 to roughly 17 contributors by stage.
- Used RAID-style visibility, milestone tracking, readiness checks, MoSCoW-style prioritization, and sponsor updates to make ambiguity manageable.
- Public scale anchor: technology associated with 460+ installed locations.

Regulated maritime operations foundation

- Maritime background supporting regulated operations, documentation discipline, risk control, route planning, safety procedures, and time-critical execution.
- Foundation in operational risk awareness, stakeholder communication, compliance-oriented thinking, and structured handoff discipline.

CORE SKILLS

Project management | Implementation delivery | Technical operations | Process improvement | Service delivery visibility | Stakeholder coordination | Operating control models | Issue escalation workflows | RAID / risk visibility | KPI reporting | Excel | Power Query | VBA | Replenishment planning logic | Root-cause analysis | Regulated operations

CREDENTIALS

PMP - Project Management Professional | WES-assessed Canadian bachelor's equivalency | Maritime OICNW foundation
