

PAVLO MALAIROV, PMP

Project Manager | Regulated Cross-Functional Delivery | Portfolio-to-Execution Planning

Winnipeg, MB | Open to Relocation | Authorized to Work in Canada | pmalairov@gmail.com | linkedin.com/in/pavlo-malairov-b51840219

PROFESSIONAL SUMMARY

PMP-certified Project Manager with experience translating complex operational and technical objectives into executable plans, delivery controls, and measurable outcomes in regulated environments. Background spans aerospace manufacturing service-delivery implementation, AI-enabled transportation technology projects, and safety-critical maritime operations. Strong fit for portfolio-to-execution settings requiring cross-functional stakeholder alignment, detailed schedules, milestone/dependency control, risk and deviation escalation, recovery planning, governance discipline, and clear accountability across diverse teams.

TARGETED FIT FOR APOTEX - ROW & LATAM PROJECTS

- Portfolio governance to execution: translate approved objectives into practical workplans, milestones, action trackers, controls, and reporting cadences.
- Cross-functional leadership: coordinate stakeholders across operations, procurement, suppliers, receiving, production, QA/technical contributors, developers, and sponsors.
- Planning discipline: use WBS, Microsoft Project, milestone trackers, dependencies, critical-path logic, RAID logs, and change-control records to keep delivery visible and accountable.
- Risk, issue, and deviation control: identify delays, constraints, and service risks early; escalate with mitigation and recovery actions rather than passive status reporting.
- Regulated-environment mindset: aerospace manufacturing support, maritime SOLAS/STCW/ISM operations, audit readiness, safety procedures, and compliance documentation.

CORE COMPETENCIES

Project Planning & Execution | Portfolio-to-Execution Translation | Cross-Functional Leadership | Stakeholder Alignment | Microsoft Project | Milestones, Dependencies & Critical Path | RAID Logs | Risk / Issue / Deviation Management | Escalation & Recovery Planning | Governance & Action Tracking | Budget / Resource Inputs | Change Control | Regulatory & Safety Compliance | Continuous Improvement | Data-Driven Reporting | Power Query / VBA / Power BI

PROFESSIONAL EXPERIENCE

In-Plant Solution Specialist - Project & Operations | 2025 - Present

MSC Industrial Supply Co. - embedded full-time at Magellan Aerospace | Winnipeg, MB

Production-critical industrial supply / consignment program in an aerospace manufacturing environment.

- Translated a consignment-program transition into an executable operating model by building the data structure, planning controls, reporting cadence, issue-tracking process, escalation logic, and service-visibility controls required to stabilize daily execution.
- Managed planning controls for 1,500+ active SKUs across 5 buildings and 17 vending systems, incorporating demand trends, lead-time variability, MOQ/package constraints, delayed deliveries, and service-risk indicators.
- Coordinated cross-functional follow-up between plant stakeholders, suppliers, receiving, procurement, production, maintenance, and MSC support teams; drove accountability through unique IDs, category tagging, dashboards, and escalation logic.
- Built a Power Query/VBA workflow to convert usage history into exception-based planning, reducing manual ordering effort from ~5 hours to ~30 minutes and improving replenishment planning accuracy by ~40%.
- Led root-cause analysis of recurring critical-item shortages, identifying lead-time, return-delay, in-transit WIP, processing, and demand-volatility drivers; redesigned control logic with layered lead-time demand and volatility buffers, reducing shortage exposure on key items by ~50%.
- Prepared operational status materials for management review, including delayed follow-ups, stockout exposure, item-search issues, median time-to-close, and corrective actions; reduced recurring complaints and communication gaps by ~55%.
- Maintained service continuity within aerospace manufacturing constraints while implementing new controls, strengthening operational governance without disrupting production support.

Project Manager - Smart City & AI-Enabled Infrastructure | 2022 - 2025

SmartC LLC | Remote

Full-cycle technical project delivery across computer-vision intelligent-transportation systems.

- Managed multiple AI-enabled technology projects through initiation, planning, execution, testing, pilot deployment, and closeout, coordinating development, QA, DevOps, hardware integration, sponsors, and external stakeholders.
- Translated sponsor and portfolio priorities into WBS structures, schedules, milestone trackers, RAID logs, MoSCoW priorities, and change-control records; facilitated kickoffs, decision meetings, action tracking, and sponsor reporting.
- Monitored delivery progress across concurrent workstreams, dependencies, and technical constraints; escalated deviations and supported recovery planning when scope, schedule, resource, or reliability risks emerged.
- Led the pilot-stage turnaround of a redesigned AI-enabled pedestrian-detection system after prior-version field-reliability gaps, coordinating hardware, software, QA, and integration workstreams; the system later scaled to 460+ installed locations.
- Supported resource and cost-impact inputs for staged projects and change requests, helping sponsors evaluate feasibility, delivery risk, budget pressure, and schedule impact before approval.

International Commercial Maritime - Multiple Vessel Operators / Fixed-Term Contract Assignments | 2014 - 2022

International / Global Vessel Assignments

Consolidated contract-based maritime experience across commercial container, bulk/capesize bulk carrier, and general cargo vessel operations.

- Progressed from Deck Cadet / Ordinary Seaman to Third Officer and Second Officer across fixed-term international vessel assignments, operating in regulated, safety-critical environments.
- Led navigation watchkeeping, voyage execution support, GMDSS/radio communications, bridge documentation, passage-planning controls, emergency readiness, and inspection preparation under the Master's command.
- Coordinated deck-department routines, drills, port-operation support, compliance documentation, and time-critical operational decisions across multinational crews and global trading areas.
- Worked under STCW, SOLAS, ISM, ISPS, COLREGs, and company SMS requirements; maintained safety procedures, audit/inspection readiness, security controls, and documentation accuracy.
- Built a foundation in regulated operations, operational risk control, procedural discipline, stakeholder coordination, and zero-failure-tolerance execution now applied to technical project delivery.

EDUCATION & CERTIFICATIONS

- PMP - Project Management Professional, Project Management Institute (PMI).
- B.Sc., Nautical Science & Marine Transportation - Odesa National Maritime Academy, Ukraine | WES Canada equivalency: Bachelor's Degree.
- Lean Six Sigma Green Belt Specialization - Kennesaw State University / Coursera | In progress.
- Cost Control & Budget Management in Projects - Columbia University / Coursera.

TECHNICAL SKILLS

- PM & Delivery: Microsoft Project, Jira, RAID logs, risk registers, change-control logs, MoSCoW prioritization, milestone tracking, status reporting, action tracking, meeting facilitation.
- Data & Reporting: Advanced Excel, VBA macro development, Power Query (M), Power BI in development, structured data transformation, dashboard reporting, exception-based planning workflows.
- Operations & Compliance: Program implementation, service delivery controls, operational governance, process stabilization, audit readiness, regulated-environment compliance, root-cause analysis, continuous improvement.
- Languages: English - professional fluency; Ukrainian - native.
